AMERICA'S FINEST . SAFEST . MOST SELECTIVE NON-POISONOUS CRAB GRASS KILLER

For the last two years the leading Fine Turf Experiment Stations have been testing Crabgraxx (Potassium Cyanate). These tests have proven far superior to the old-fashioned Crab Grass killers, which were poisonous and when applied in amounts heavy enough to kill crab grass, ordinarily killed out established Turf grasses.

Chief advantages of Crabgraxx are as follows:

1. Crabgraxx can be applied any time during the growing season. Kills Crab Grass without permanent injury to the Turf grasses.
2. Is non-poisonous. Crabgraxx is the only Crab Grass killer that is non-injurious to warm blooded animals or people.
3. Crabgraxx is non-toxic to the soil, even when applied in amounts much larger than recommended to kill Crab Grass.
4. It is economical. It is much less expensive than most other Crab Grass killers.
5. Not a fire hazard or dangerous to use.

4 oz., \$1.00; 1 lb., \$2.95; 6 lb., \$10.95.

The New Improved Weedone

contains the powerful 2,4,5-T and 2,4-D, the two most effective chemicals for killing lawn weeds, poison ivy, poison oak, honeysuckle, wild blackberries, wild raspberries and over 90 other weeds and woody plants WITHOUT KILLING THE GRASS. Non-poisonous to animals or humans.

Kills a greater variety of lawn weeds and woody plants than any products containing only one of these chemicals. Does not give off vapors that cause injury to flowers or ornamentals.

Prevents re-sprouting of tree stumps. The only ALL-PURPOSE weed killer.

8 oz. can, \$1.00; 1 qt. can, \$2.75; 1 gal. can, \$6.95; 5 gal. can, \$25.00.

WEEDAR 64. For control of weeds in farm crops. Qt. \$3.00; gal., \$5.25.

WEEDONE CONCENTRATE "48". This formula much used by golf courses, parks, farms, etc., per gallon, \$5.00.

WEEDONE BRUSH KILLER 32. For the control of undesirable woody plants and brush in fence rows, pastures, right-of-ways, etc. Will also kill stumps of large trees. Mixes with oil and water. Quart \$4.00; gallon, \$8.75.

WEEDUST. A 2,4-D formula in powder form. Ready to use in a 12-oz. shaker can. Good for spot killing weeds in the lawn. Price, 75c.

AT LAST—AN ALL PURPOSE FRUIT TREE SPRAY

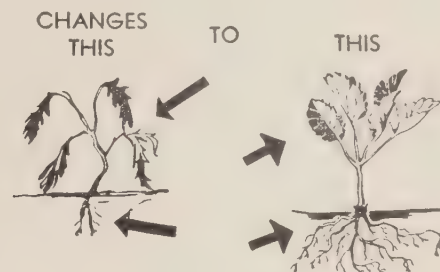

TREE-TOX is the new, complete fruit tree insecticide-fungicide, containing a scientific blend of two insect toxicants, DDT and Chlor-dane; and two fungicides, Micronic Sulphur and Ferric Dimethyl Dithiocarbamate; chemically treated with adjuvants, spreaders and wetting agents. The use of this single product is all that is necessary for controlling diseases and insects on apple, pear, cherry, plum and peach trees.

TREE-TOX is a specially developed material to meet the ever-increasing demand of the small fruit grower having but several fruit trees to care for. **Tree-Tox** relieves him of the necessity of buying and mixing 5 or 6 different materials. 1-lb., \$1.00; 4-lbs., \$3.60.

Our Tree Surgery Department

Tree Surgery, as practiced by responsible parties, is not a racket and does not consist of miraculous cures and secret processes as many are led to believe, but is a series of common-sense methods perfected by a study of trees and their growths and habits and used in their care and preservation. If you value a tree, get an experienced tree surgeon to do the necessary work on it. An inexperienced laborer will often only succeed in further damaging the tree. We maintain a staff of expert tree men with a knowledge of Pruning, Cavity work, Cabling and Bracing, Fertilizing, Spraying and the general care of trees.

Purpose of Pruning. To keep all dead, broken and diseased limbs cut out. To keep trees within bounds. To keep small trees shaped up every year or two. Keep all cuts painted with waterproof tree compound.

Purpose of Surgery Work on Cavities. Decay enters at old cuts, wounds, frost cracks, etc. It does not take it long to spread over a wide area and eat deep into the tree. The longer the cavity is neglected the more it will cost to fix it, if it has not gone so long it is impossible to fix. The tree surgeon removes all the decayed and diseased wood, disinfects, brace and fills the cavity. The decay is stopped and the wound will start healing over.

Purpose of Cabling and Bracing. "An ounce of prevention is worth a pound of cure." Cabling and bracing will strengthen the tree with bad crotches, or long overhanging limbs. The wind and snow and ice will not then break and split off large limbs that will spoil the shape of the tree for all time. If a split is not too bad it can be drawn back into place and by properly bracing, the tree will be as good as new and strong or possibly stronger than before.

Fertilizing. More and more do we realize the importance of feeding trees, especially those trees which have to withstand city conditions. A healthy vigorous tree is not as susceptible to attacks of insects and disease, and abler to resist if attacked. Feed your trees every two years; it will pay.

Spraying. Dormant spraying will control scale insects and kill the eggs of some of the other pests. Summer spraying is necessary to control some of the eating insects and the leaf and twig blights. Make sure that whoever sprays your trees has a knowledge of trees, insects and spray materials. Otherwise the wrong spray may be used and have no effect on the insect or disease and again the trees may be seriously damaged as some spray materials will kill certain varieties of trees. We have equipment to take care of your spraying jobs quickly and thoroughly.

OUR EXPERIENCED MEN WILL SOLVE YOUR TREE PROBLEMS AT REASONABLE COST. GENERAL CARE OF YOUR TREES UNDER OUR SUPERVISION WILL INSURE THEIR SAFETY AND CONTINUED HEALTH.
